The simulation module should be tested against a peak volume of around 8m³ 3D models like missiles, drones etc.9. The simulation module should be able to create and define individual frames for robot, models and printing.10. The simulation module should be able to convert the object files such as STL into robot path-oriented G-codes.11. The simulation module should be able to convert the G-codes into estimated toolpaths with parameter optimization facility.12. The simulation module should have collision detection functions.13. The simulation module should generate programs in terms of user configurable types such as Python as well as in robot machine languages such as LS machine language for FANUC robot.14. The simulation module should perform consistently during the printing peak volume of 8m³.15. The simulation module is expected to allow users to design and generate optimizable robotic programs. Vendor to propose a mechanism and detail how the proposed simulation module will address the needs of various complex structures.16. The solution should be up and running within the time period specified by the vendor in the Technical Bid.
